Uniwell

TX870 SERIES

Designed specifically for Casual Dining, Bars, Clubs and Quick Service Restaurants

The Uniwell TX-870 is a 10.4" 256 Color TFT touch screen terminal with flash ROM technology. TFT provides fast refresh speeds and very high resolution. The viewing angle of the display is easily adjustable, promoting smooth, accurate transaction entry. Training new employees is quick and simple.

A 10Mb/s Ethernet option enables the IRC system to be configured to meet any busy environment that requires heavy data transfer at high speeds.

The TX-870 flash ROM firmware was developed from the already proven TX-850 and has been enhanced with new features like "Table Plan". Also, the two models can be used in the same IRC system.

For Quick Service Restaurants the TX-870 provides Eat In, Take Out and Delivery functionality with totals. Automatic piece count reporting promotes accurate preparation to meet cooking needs at peak periods of the day.

Full communications are available through several optional back office reporting and inventory packages.

.MAJOR FEATURES

- 10.4" 256 Color TFT dual backlight touch screen display
- 1200 PLUs Standard, Max. 20,000 PLUs with optional memory
